P800 ProxSwitch Inductive Proximity Sensor

APPLICATION

The P800 ProxSwitch is an inductive sensor designed to detect shaft speed, shaft position, gate position, or object presence.

METHOD OF OPERATION

The P800 ProxSwitch is a CSA Class II, Division 1 approved limit switch style proximity sensor, which works on the damped oscillator principle. No contact is made between the sensor and the object being monitored. The P800 will detect a ferrous object at 1/2" and a non-ferrous metal object at a distance of 5/16".

Two different Sensor outputs are available. One with changeover relay contact outputs which works on a supply voltage of 24 to 240 VAC / 12 to 240 VDC and another with solid state NPN/PNP transistor outputs which works on a supply voltage of 10 to 30 VDC.

Both units are fully encapsulated and come with a 6 ft lead and 1/2" conduit entry. Two LED's show power supply and input status.
